10. Conclusion. The Future.	<b>16.</b>

# 1. Description. Vision. Advantages.

The Ofero Token (OFE) is a token built on the Elrond POS (Proof of Stake) Blockchain. The aim of the cryptocurrency is to surround itself with a healthy digital ecosystem, Ofero Network, that provides both sustainability and profitability, as well as being able to generate a future impact on the cryptocurrency market. Moreover, it aims to establish an instrument not only for investment, but also for usage which could provide real advantages and offer an answer to the trends in the field, and the market demand.

## How?

The vision of Ofero Network is simple and clear. The future requires smart investments, supported by a strong currency. This principle implies clever investments in the development of business environment, ecology, education, and innovative ideas. It also means the creation of new solutions to old problems. That is the reason why Ofero Token (OFE) was created.

The mission of Ofero Network team is to set this dynamic ecosystem in motion. Giving to the users the possibility to use the Ofero currency (OFE) in the ecosystem, it will become a valuable asset in everyone's wallet.

Ofero Network aims to attract, build, and develop an entire community. Then to provide benefits and opportunities to its members by using concrete tools, various utilities, real and self-sustainable investments.

Ofero Token (OFE) is based on the marketing and advertising platform ofero.ro, which has already established itself as a business community benefitting from its own operating system. Our team set out to build the Ofero Network ecosystem and then develop it in multidirectional manner around this newly-created and ever-growing community.

The companies registered with ofero.ro are provided with an active instrument - the ofero.ro token. The ofero.ro token enables the purchase of favorable positions in searching of customers, the rising to the top listed companies and others similar advantages. All of these guarantee visibility and generate leads.

Initially, the ofero.ro platform becomes (1) a means of obtaining the Ofero Token cryptocurrency (OFE) - via its distribution to the ofero.ro token holders, and (2) a future utility of the cryptocurrency - by using it, in accordance with the law, for trading goods and services between the businesses listed on the platform.

In terms of future projects, the multidirectional evolution of the OFE cryptocurrency includes investments in the production of “green energy”, app development, use of it as a means of payment and various other innovative ideas that will be revealed as the project moves forward.

*The main advantages of Ofero Token (OFE) are detailed described in the following:*

1. It is powered by one of the most powerful POS blockchains – Elrond.
2. It is supported by the ofero.ro platform, which provides a solid starting point, stability, and perspective.
3. It considers several investments directions and is designed for future-oriented areas.
4. It includes multiple utilities, and their number is constantly growing.
5. The team behind Ofero Network is made up of experienced specialists able to professionally cover all aspects of such a project.

## 2. Why to invest in the Ofero Token (OFE)?

Ofero Token (OFE) provides answers to an ever-growing market demand - that of digital currencies being able to support physical investments, and vice versa. It is a way to build confidence in both the project and the currency. Basically, in addition to the other advantages, the Ofero Token (OFE) offers the possibility of automatically investing in the physical projects that are currently under development within the network, as well as in the projects that will be developed in time. Their return on investments is mirrored in the cryptocurrency value, gradually and in different forms.

In addition, all proposed and forecasted investments are made in areas that will become increasingly important in the future: "green energy", education, digital apps, online marketing, payment systems, etc. Every Ofero Token (OFE) investor will implicitly become part of these projects.

Moreover, the ofero.ro platform will enable the interconnection of thousands upon thousands of companies, which will also benefit from the advantages provided by the Ofero Token (OFE). That means growth, opportunity, and trust.

Another asset of this cryptocurrency is the gradual increase in the number of Ofero Token (OFE) utilities, as well as their diversification over time. The system grows as utilities and functionalities based on investments and innovative ideas are constantly added, and so is the cryptocurrency value.

**Note:** Similar to all cryptocurrencies, investments must be made in an informed, deliberate and assumed manner.

## 3. Overview

### *The ofero.ro platform*

It is a dynamic marketing and advertising platform and registration is free of charge. Its goal is to help companies advertise and interconnect with the aid of a tool specially designed for this purpose. Therefore, after registration, companies will have the opportunity to purchase ofero.ro tokens within the platform.

An ofero.ro token is, in fact, an ofero.ro “cell” that may be used, traded, or kept as an investment within the platform. The ofero.ro tokens may be used for the purchase of favorable positions in searching of customers, and in rising to the top listed companies registered with ofero.ro. They could also be traded or transferred between companies, depending on needs, context, or purpose. In addition, as the number of ofero.ro tokens available decreases - the value of a token increases by purchase, thus the token basically turns into an investment.

### *Why is this platform important for the Ofero Token (OFE)?*

There are two well-defined reasons:

1. Ofero Token (OFE) has been designed so that 20% of the total number of available cryptocurrencies reach the business owners registered with ofero.ro, who have purchased or who will ultimately purchase ofero.ro tokens. The allocation of Ofero Token (OFE) coins is done proportional with the number of ofero.ro tokens purchased.
2. Ofero.ro becomes a utility of the Ofero Token (OFE) currency. The future goal is that the companies registered within the platform database will be able to mutually trade goods and services using the Ofero Token (OFE).

### *The Elrond Blockchain*

Designed as a digital ecosystem, the Elrond blockchain enables features such as crypto transactions, dApps. (decentralized apps) or Smart Contracts. It could be seen as a “provider” of advantages for a digital coin built using its technology. These advantages include a superior transaction confirmation speed, an increased security, an architectural design with high operating and scaling capacity. Therefore, the Ofero Token (OFE) was built on this blockchain and uses it for development

## 4. What are the principles underlying the development of the Ofero Token (OFE)?

**1. Diversity of utilities.** The cryptocurrency value increases as its associated utilities diversify and multiply. That is one of the main directions we are aiming within the Ofero project. We intend to do so by approaching different areas, that have great potential and are reliable.

**2. Investment continuity and consistency.** Once the mechanism is up and running, starting from current and near-term investments, the Ofero Network team aims to develop a steady stream of other placements, based on the market trends and demand. These investments will be associated with the cryptocurrency, becoming utilities, and will be communicated throughout the project.

**3. Innovation.** All we think and plan for is future-oriented in order to find ideas, solutions and applications based on new technologies or improving existing technologies. Innovation stems from both the way we approach these projects and the way we put them into practice.

**4. Transparency.** We are convinced that this is an essential cornerstone for trust and sustainability. That is the reason why all the projects developed by us are subject to full transparency and visibility, from the public wallets associated with the distribution of cryptocurrencies and up to the tracking/inventory of path followed by the tokens, services, and users within the ecosystem.

## 5. What utilities does the Ofero Token provide?

### The ofero.ro platform

The success of this platform, since its launch in 2007, has led us to the Ofero Token (OFE) project. We relied on the experience gained, the results obtained, and the system already created. This system comprises of an ever-growing database which currently includes thousands of Romanian businessmen, from various areas of expertise. These companies are provided with a tool - the ofero.ro token, which enables them to create competitive advantages on the platform and to connect with other businesses.

The objective of ofero.ro is to represent a high-performance means of promotion, marketing and advertising that brings together tens of thousands of businesses within a single community. In this context, the presence, role, and use of the Ofero Token (OFE) are becoming essential.

First of all, a substantial percentage of the number of available cryptocurrencies will be allocated to business owners registered on the platform and who hold/purchase ofero.ro tokens. Therefore, the cryptocurrency is easily put into circulation, and the stage becomes part of the project roadmap.

Secondly, starting from the platform database and provided the Romanian laws allow it, the aim is to enable the registered companies to mutually trade goods and services using the Ofero Token (OFE). This is the main use of the currency, associated with the ofero.ro platform.

Lastly, the Ofero Token (OFE) provides optional one-year vesting for business owners. They are allocated Ofero Token (OFE) in direct proportion with the number of ofero.ro tokens currently held or subsequently purchased on the platform.

### “Green energy” investments

Climate change is a global challenge that requires an intelligent approach focusing on concrete actions at international, regional, national, and local level. The European Green Deal - the new EU enlargement strategy - published by the European Commission (COM) on December 11th, 2019, sets the direction for the various European policies for the coming years.

The document is linked to a number of legislative and non-legislative initiatives in various areas, such as environment, climate change, energy, construction, industry, transport, agriculture, digitalization, and the financial sector. It represents a roadmap which features the steps to be taken by the European Commission in order to facilitate the achievement of the climate neutrality objective.

The transition to this objective will generate significant opportunities, including in terms of the potential for growth, the creation of new business models and new markets, the creation of jobs and technological development.

The future-oriented policies in the fields of research, development and innovation will play a crucial part in this regard.

The European Union aims to become the world's first "climate-neutral block" by 2050. Given such perspective, the expansion of the energy sector is automatically required through the establishment and development of green sources for electricity production.

Thus, one of the objectives of the Ofero project is to invest in such green sources: photovoltaic plants, wind farms and other sustainable ways for generating electricity. The next step, as shown by the trends in the crypto world, is to tokenize these businesses, using various tools and methods, in line with the proposals of the Regulation of the European Parliament and Council of Europe - EU Directive 2019/1937.

Consequently, all users within the Ofero Network will be able to contribute to the increase of the renewable energy production capacity, with all its well-known advantages. In addition, a part of the revenue generated by these plants will be translated into a rewards portfolio for the ecosystem users.

## Apps development

This field is virtually limitless, and that makes things more interesting. Ofero Token (OFE) aims to support the creation and development of apps that are necessary and useful to the market. Whether talking about HORECA, education or leisure, the initial premise implies that things can be done easier, better, and more efficiently. We are optimistic about the innovative and original ideas that we and our partners conjured up or will come up with in the future.

The result is a series of diversified, useful apps, applied to the highest extent possible. A series that will be supported by the Ofero Token (OFE) and that will become a powerful utility thereof.

The launch of this new app is part of the project development stage, and all the details will be communicated on the official website along the way.

## Payments

The shaping, building and growth of the Ofero Token (OFE) partner network has already begun. Our precise objective is to extend it to as many areas as possible, and to as many suppliers and manufacturers as possible. We strongly believe that the usability of the cryptocurrency as a payment method is one of great importance and it will constitute a major advantage in the future. That is why our team dedicates extra time and energy to the development of these partnership.

## 6. What other uses will the Ofero Token have?

The Ofero Network has a clear vision of how it will operate in the future, in terms of the utilities developed for the Ofero Token (OFE). The concept design and implemented by Ofero team enables flexibility, adaptability, and versatility in terms of the directions to be followed. These are influenced by the evolution of economy, the operation of the market and the trends in the crypto field and associated with the same.

Firstly, the Ofero Network will pursue the development and exponential growth of the existing utilities. It will harmonize them with the market and add the necessary elements for the integration of the cryptocurrency within their operation.

Secondly, it will identify and assess new investment opportunities, in accordance with the proposed objectives and the evolution of the economy. These new opportunities, ideas and projects will be designed and applied from the very start as utilities and functionalities of the Ofero Token (OFE) currency.

Finally, the Ofero Network digital ecosystem will include an entirely portfolio of investments and utilities that will highlight the multi-directional and diversified Ofero Token (OFE) currency.

Overall, it is this very wide range of possibilities that makes us look to the future with confidence. Regardless of market operation, we are able to comply and proceed towards the desired goal - consolidating the Ofero Token (OFE) cryptocurrency, based on concrete utilities and smart, trend-oriented investments.

## 7. The number and distribution of Ofero Tokens (OFE)

The Ofero Token will have a total supply of **450.000.000 de OFE.**

Its distribution is done on a pro-rata basis, as follows:

- > 10% Team (10-year vesting)
- > 16% - ASH Ventures
- > 16% - hatOFF Ventures
- > 11% - Exchange Liquidity
- > 11% - for Farming & Staking
- > 20% - to Romanian Business owners registered on ofero.ro
- > 16% - for Education and Marketing

## 8. The team behind the project

# 10. Conclusion. The Future.

The future belongs to those who have completely understood this principle. **Ofero Token (OFE)** has been designed from the very beginning considering this. The opportunities are countless, and the good news is that they can now be foreseen because we know what the future holds in store.  
How? We will make it happen.

All you have to do is join!
